

Investor Pitch: Curated Social Experiences Marketplace (MVP-First Strategy)

1. Problem Statement

In today's digital world, people are more connected than ever, yet meaningful interaction is declining. Social media platforms focus on content consumption, dating apps focus on romantic connections, and professional networks focus on career growth.

However, there is a clear gap in platforms that enable structured, meaningful, and small-scale social interaction.

Users struggle to:

- Find genuine conversations
- Discover like-minded people in small groups
- Participate in meaningful social experiences without noise or scale

At the same time, many individuals possess strong social and conversational skills but lack a platform to monetize them.

This creates a clear market gap between demand for meaningful interaction and supply of socially skilled individuals.

2. Solution

We are building a marketplace for curated social experiences.

The platform allows hosts to create and monetize interactive events, while users can discover and book experiences tailored to their interests.

These experiences include:

- 1:1 sessions such as deep conversations or practice sessions
- Small group events such as discussion circles, networking rooms, or themed hangouts

The platform acts as a trusted intermediary for discovery, booking, and payments, while leveraging external tools like Google Meet for execution.

3. MVP Strategy

We are launching a lean MVP to validate core user behavior before investing in full-scale infrastructure.

The MVP focuses only on:

- Event discovery
- Booking flow
- Payment processing

All event execution will take place on external platforms such as Google Meet or Discord.

This approach minimizes development complexity and allows rapid validation of the key hypothesis: users are willing to pay for curated social experiences.

4. Why Not Build Full App Immediately

Market Uncertainty:

This is a behavioral shift. The primary risk is not technical execution but whether users will pay for these experiences.

Avoid Premature Optimization:

Building chat systems, video infrastructure, and recommendation engines is expensive and unnecessary at this stage.

Faster Learning Cycles:

A lean MVP allows us to test assumptions, gather feedback, and iterate quickly.

Capital Efficiency:

We prioritize demand validation and supply quality over infrastructure investment.

Focus on Core Insight:

The product's success depends on trust, experience quality, and repeat usage rather than technology.

5. MVP Scope

Included Features:

- Event listing page
- Host profiles
- Event detail pages with title, description, pricing, and schedule
- Booking and payment integration

Excluded Features:

- In-app messaging
- Video calling infrastructure

- AI-based recommendations

This ensures focus on validating willingness to pay and user engagement.

6. Business Model

Revenue will be generated through:

- Commission on each booking (15–25%)

Future monetization opportunities include:

- Subscription models for users
- Featured event placements
- Premium host tiers
- Exclusive community access

7. Validation Plan

We will validate both demand and supply:

Demand Metrics:

- Conversion rate from visit to booking
- Popular event categories
- Price sensitivity

Supply Metrics:

- Host performance and earnings
- Event completion rates
- User feedback and satisfaction

Key Hypothesis:

Users are willing to pay for curated, meaningful, small-group social experiences.

8. Advantages of Event-Based Model

- Higher scalability: One host can serve multiple users simultaneously
- Reduced social friction: Group events feel more natural than 1:1 paid interactions

- Stronger positioning: Events and experiences are easier to market than companionship
- Better economics: Higher revenue per session through group participation

9. Risks and Mitigation

Empty Events Risk:

Low attendance can lead to poor user experience.

Mitigation: Minimum booking thresholds and manual curation.

Quality Control:

Low-quality hosts can impact retention.

Mitigation: Manual onboarding and initial host selection.

Platform Leakage:

Users may move interactions off-platform.

Mitigation: Future implementation of credit systems and community features.

10. Expansion Vision

Post-validation, we will expand into:

- In-app event hosting capabilities
- AI-driven event recommendations
- Recurring community-based experiences
- Hybrid online and offline events
- Global marketplace expansion

11. Strategic Insight

This platform represents the monetization of human interaction.

Similar to how the creator economy monetized content and the gig economy monetized skills, this platform enables individuals to monetize their ability to connect, engage, and create meaningful social experiences.

12. Conclusion

We are not just building a product but validating a new behavioral category.

By starting with a lean MVP, we reduce risk, accelerate learning, and position ourselves to build a scalable and defensible platform once the core hypothesis is validated.

One-Line Pitch

We are building a marketplace for curated social experiences where people can host and monetize meaningful interactions, starting with a lean MVP to validate user willingness to pay.
